

ALİ BERK BATUR

Front-End Developer

about me

I was born in Istanbul in 1993, I made and involved many projects of Front-End since 2013. HTML-XHTML coding, CSS3 designing and animations, Responsive and Cross-Browser adaptability, JavaScript developing, also since few years i'm working with Vue.js and React.js. My priority about design is following the web-tecnologies up to date and thanks to that designing the websites in a very interactive way by the help of flow and the discrepancy principles. I can use Selenium Webdriver for testing also. On the Backend side i can develop some basic Sql queries and Php. I worked with Scrum and Kanban that i'm familiar with Agile Methodologies. Also i can work remotely with using GitHub and Jira.
